Name of the Guide		Dr. Archana Kalidindi

Abstract

SmartQuiz – AI-Powered Adaptive Quiz Generator is a web-based application designed to make online learning more interactive and personalized using Artificial Intelligence. The system allows users to enter a topic and automatically generates multiple-choice questions based on the selected subject. After completing the quiz, the system evaluates the user's performance and provides the score along with the correct answers.

The main feature of SmartQuiz is its adaptive learning approach, where the difficulty of questions can be adjusted according to the user's performance. If a user performs well, the system can provide more challenging questions, while users who struggle can receive easier questions for better learning. AI techniques are used for automatic question generation, reducing the need for manually prepared question banks.

The project can be developed using Python, Flask, HTML, CSS, JavaScript, and an AI API, with SQLite used for storing user scores and quiz history. The system can be developed incrementally following Adaptive Software Engineering principles, with features added and improved through multiple iterations. Future enhancements can include personalized learning recommendations, performance analysis, multiple subjects, user authentication, and cloud deployment.

Keywords: Artificial Intelligence, Adaptive Learning, Quiz Generator, Personalized Learning, Web Application, Adaptive Software Engineering.
